

2-4. 객체와 프로타입 차이

1. 객체

```
function Animal(name) {  
  this.name = name;  
  this.getName = function () {  
    console.log(this.name);  
  }  
}  
  
var monkey = new Animal("Monkey");  
var dog = new Animal("dog");  
var cat = new Animal("cat");  
monkey.getName();           // Monkey  
dog.getName();               // dog  
cat.getName();               // cat
```

monkey	dog	cat
name	name	name
getName()	getName()	getName()

2. 프로타입

```
Object.prototype.getName = function () {  
  console.log(this.name);  
}  
  
function Animal(name) {  
  this.name = name;  
}  
  
var monkey = new Animal("Monkey");  
var dog = new Animal("dog");  
var cat = new Animal("cat");  
monkey.getName();           // Monkey  
dog.getName();               // dog  
cat.getName();               // cat
```
